This book shows fifty recently constructed Bell System telephone buildings. These buildings are typical of the structures, large and small, which are being erected to care for the service requirements of the Nation's rapidly growing telephone system.

In their design and construction, these buildings reflect the policies of the Bell System. They are planned to provide at reasonable cost for present service needs and for the continuing growth of telephone use. Modern in conception, they also reflect in their substantial character and careful planning something of the System's stability and its regard for the comfort and convenience of its customers and its employees. These buildings contribute toward the achievement of the ideals of the communities in which they are located and exemplify the progressive spirit which has made possible modern telephone communication as it is today and as it will be in the years to come.
